

Experiment 10

Aim

Design HTML form for keeping student record and validate it using Java script.

Code

```
<html>
<head>
<script>
function valid() {
    var fname = document.forms.RegForm.fname.value;
    var lname = document.forms.RegForm.lname.value;
    var mobile = document.forms.RegForm.mobile.value;
    console.log("valid");

    if (fname == "") {
        window.alert("Please enter your first name properly.");

        return false;
    }

    if (lname == "") {
        window.alert("Please enter your last name properly.");

        return false;
    }

    if (mobile == "") {
        alert("Please enter valid phone number.");

        return false;
    }

    return true;
}
</script>
</head>

<body>
<h1 style="text-align: center">REGISTRATION FORM</h1>
<form name="RegForm" onsubmit="return valid()" method="post">
    <p>
        Fname:
        <input type="text" size="65" name="fname" />
    </p>
    <br />
    <p>
        Lname:
```

```
        <input type="text" size="65" name="lname" />
    </p>
    <br />
    <p>
        Mobile:
        <input type="text" size="65" name="mobile" />
    </p>
    <br />

    <p>
        <input type="submit" value="send" name="Submit" />
        <input type="reset" value="Reset" name="Reset" />
    </p>
</form>
</body>
</html>
```

Output

REGISTRATION FORM

Fname:

Lname:

Mobile:
